

# Network connection in College Nordmetal interrupted

Network interrupted Sat 31st, 12:40 p.m, for NC A and west part of NC B

According to our network monitoring system one switch went dead on Sat 31st, around 12:40 p.m.

This leaves 48 rooms in NC A (3rd, 4th and 5th floor) connected, but disconnected all other rooms in NC A, the west wing of NC and the westerly half of NC B's north wing, as well as it disabled all wireless access points in the above mentioned area.

As the troubled device has to be replaced, the interruption will continue several hours.

During the replacement network access in the above mentioned apartments still having access now will be interrupted, too.
