

Scientific Typsetting with LaTeX Workshop

On Friday, 19:00, 14th of September, in RIII seminar room, Yiping is giving a hands-on workshop on LaTeX. Knowing how to use LaTeX is a very important skill, not just to physics students, but to every researcher. LaTeX has become the standard in typesetting research papers, but that does not limit its use to that. LaTeX can also be used in writing beautiful lab reports, homeworks and even to prepare presentation slides with help of the package "beamer".

Before attending the workshop, we urge you to *go over the slides and to take a look at the example files*: [LaTeX--workshop.zip](#)

The slides should guide you to where you can install a LaTeX distribution. Please come prepared with one installed!

See you there and then!
