

teamwork supports blogging clients

You can now use blogging applications for posting news entries to teamwork.

Well, almost.

Currently, the implementation is limited. Only the "Blogger API" is implemented. [w.bloggar v4.00](#) is working, though [Performancing for Firefox](#) isn't. Also, tags are not supported to be attached while blogging and have to be added by hand. Uploading of files is also not supported, nor are templates, nor is renaming posts.

See [this external page](#) on how to configure various blogging clients.

The target URL to use for configuration of the blogging tool is: <https://teamwork.iu-bremen.de:8443/rpc/xmlrpc>.

Or, depending on your tool's configuration items:

Protocol	https (aka http, secure)
Server	teamwork.iu-bremen. de
Port	8443
Endpoint	/rpc/xmlrpc
