

CampusNet and teamwork downtime Thu Feb 5, 8-9

CampusNet and teamwork will be unavailable Thursday February 5, starting 8 o'clock. Works are expected to be completed within 15 minutes, but one never knows...

Background

Current performance issues of CampusNet and teamwork are due to an incredible number and complexity of database queries by the CampusNet application.

During the downtime we will double CPU and RAM resources of the database server, thereby improving query throughput. The root cause, improving performance and scheduling of CampusNet requests, can not be solved by us.

i In a second step, we will move off teamwork from that same database server to its own database. Expect another announcement soon.
