

Aftermath of admin email change of 2007-03-01

On March 1st, 2007, email delivery for admin members has been changed.

 No negative effects were reported, the transition went smooth. [Admin Email](#) users didn't have to reconfigure anything.

Resulting changes for email usage for admin members are:

- MS Outlook is client for ALL emails without client-side per-user configuration.
- The Web interface for ALL admin emails is <https://exchange.jacobs-university.de/>.
- Vacation messages can be set (and reset) either in Outlook or via the admin email web interface.
- Vacation messages work for ALL incoming emails.
- [Admin Email](#) access via Outlook needs [VPN Access](#) from outside the admin network for ALL emails.
- [Admin Email](#) access via Web **does not require** [VPN Access](#) any more.
- [Jacobs University Email](#) web access (aka "mail2web") can no longer be used for reading admin emails or setting admin vacation messages.

 More information, including links to "how to"s, is available via the page [Admin Email](#).
